SUMMARY

Shopify Full Stack Developer with 3+ years building, customizing, and extending Shopify & Shopify Plus stores end-to-end. Comfortable across the stack — from utility-first, accessibility-aware theme work in Liquid and Web Components to custom Shopify apps, Shopify Functions, and Checkout Extensibility. Three private apps shipped to client stores. Focused on modular architecture, pixel-perfect UI, and measurable performance.

TECHNICAL EXPERTISE

Shopify Development

- Strong experience with **Shopify Liquid**, theme architecture, and **Online Store 2.0** — sections everywhere, blocks, metafields, metaobjects, and dynamic content sources.
- Hands-on with both the **Dawn theme** and Shopify's newer **Horizon theme**, including bespoke section/block development and theme migration work.
- **Shopify Plus** experience including **Checkout Extensibility** — Checkout UI extensions and branding API for Plus-tier customizations.
- **Shopify Functions** — built discount, cart-transform, and delivery customization functions in JavaScript/TypeScript using Shopify CLI templates.
- Fluent with **Shopify CLI** for theme development, app development, dev stores, and function deployment.

Shopify APIs

- **Storefront API** (GraphQL) — headless storefront data, custom search, and dynamic product surfaces.
- **Admin API** (REST & GraphQL) — orders, products, customers, metafields, and bulk operations.
- **AJAX Cart API** — cart drawer, sticky add-to-cart, line-item properties, and no-reload upsell flows.
- **Section Rendering API** — partial section re-rendering for filters, variant updates, and dynamic UI without full page loads.
- Webhook handling for orders, products, inventory, and app lifecycle events.

Shopify App Development

- Built **custom private and embedded Shopify apps** using Node.js, Remix, Shopify App Bridge, and Polaris.
- Implemented OAuth, session token auth, webhooks (orders, products, app/uninstalled), and Admin API mutations.
- Comfortable extending merchant workflows through **Admin UI extensions** and theme app extensions.

Frontend Engineering

- **JavaScript (ES6+)** with strong focus on **native Web Components** / custom elements — the pattern Shopify themes (Dawn, Horizon) are built on.
- **HTML5** written with semantic markup, ARIA, and **WCAG accessibility** in mind — keyboard navigation, focus management, color contrast.
- **Tailwind CSS** and utility-first methodologies; also comfortable with modular CSS, BEM, and custom design tokens.
- Responsive, mobile-first layouts across themes and headless storefronts.

Build Tooling & Version Control

- Modern bundler workflows with **Vite** and **Webpack** for theme assets and app frontends.
- **REST** and **GraphQL** API consumption and authoring — paginated queries, bulk operations, and webhook handlers.
- **Git** daily workflow — feature branching, PR review, rebasing, conflict resolution; GitHub-based collaboration.

Performance & QA

- Google **Lighthouse** audits for performance, accessibility, and best-practice scoring.
- Lazy loading, WebP image conversion, CSS/JS minification, and removal of dead assets.
- Debugging with browser DevTools, Shopify Theme Inspector, and Liquid render profiling.

Third-Party Apps & Integrations

- Configured and theme-integrated apps including **ReConvert**, **PageFly**, **Loox Reviews**, **OneClickUpsell**, **AfterSell**, and Shopify Search & Discovery.
- Set up and managed payment gateways — Stripe, plus local Pakistani methods (JazzCash, Easypaisa, SadaPay).

SHOPIFY APPS BUILT

Three custom Shopify apps shipped to live client stores. All built as embedded private apps — source kept confidential under client agreements.

CartSense — *turn silent abandonment into actionable insight.*

Most stores see *that* a cart was abandoned — CartSense answers *why*. The app injects a lightweight feedback prompt into the cart and surfaces structured drop-off reasons (price, shipping, payment hesitation) plus free-text feedback inside an embedded Admin dashboard, giving merchants a real conversion-recovery signal instead of guesswork.

Stack: Remix, Polaris, Shopify App Bridge, Admin GraphQL API, theme app extension for cart injection.

Low Stock Inventory Tracker — *never let a bestseller go out of stock again.*

A background watcher that listens to inventory webhooks across the whole catalog and pings the merchant the moment a SKU dips below a configurable threshold. Replaces manual spreadsheet checks with proactive, per-product reorder alerts — configured once, then quietly does its job.

Stack: Node.js + Remix, Admin GraphQL API, `inventory_levels/update` webhooks, embedded Polaris UI.

CronPilot — *scheduled store automations without leaving Shopify.*

A cron-job runner built natively for Shopify. Lets merchants schedule recurring store operations — inventory syncs, scheduled product publishing/un-publishing, metafield refreshes, draft order creation — from a single Admin dashboard, replacing brittle Zapier setups with a store-scoped, reliable solution.

Stack: Node.js, Remix, Polaris, Admin GraphQL API, server-side cron worker, App Bridge.

EXPERIENCE

Fashionphile — Dawn Custom Pages Development

Onsite — Integriti — Dec 2025 to Feb 2026

- Developed **12+ custom pages** on Dawn using Online Store 2.0 architecture — reusable sections/blocks for scalable, merchant-editable content.
- Built the **“Is This Authentic?”** interactive game page entirely in JavaScript — event-driven progression, dynamic DOM rendering inside Dawn sections, score-based end-state, no page reloads.
- Implemented **section-within-section** rendering — dynamic UI state swaps inside the same section flow via Section Rendering API.

Kiddospace by Simone Nanni

Onsite — PrimeTK — Mar 2025 to Oct 2025

- Revamped the Shopify storefront for a children's educational brand — design consistency, navigation, and mobile responsiveness from the ground up.
- Customized Dawn with advanced filtering, dynamic sections, and **metafield/metaobject-powered** features; translated Figma into pixel-perfect Liquid sections.
- Lifted AOV with ReConvert / AfterSell upsells; cut page load times with lazy loading, WebP, and code minification.

Scrubser — Dawn / Custom Theme

Remote — BrainSpate — Mar 2024 to Dec 2024

- Built Dawn-based storefront from scratch — branding, layout, navigation, and core storefront settings.
- Built multi-level brand-based navigation, customized homepage sections, and enabled Quick Buy on collection pages.
- Configured product option interfaces (size, color) and Shopify-native filtering / facets — minimal third-party app dependency.

Shopify Ammarah Khan

Onsite — DMS — Jul 2023 to Jan 2024

- Built multi-level navigation, mega menu, and homepage hero / featured collection sections via Theme Customizer.
- Surfaced structured product info (fabric, care, sizing, delivery) through metafields, theme blocks, and accordions.
- Set up Search & Discovery filtering; integrated WhatsApp consultation CTA and newsletter signup.

ValleyEyeWear

Freelancing

- Built pixel-perfect header and mega-menu with hover-triggered dropdowns matched to reference design across desktop/mobile.
- Developed a fully custom product page using **metafields for lens bundles** (Non-Prescription, Single Vision, Progressive) with dynamic pricing logic.
- Integrated a third-party virtual try-on tool with seamless UI placement on the product page.

EDUCATION

Bachelor's in Computer Science — University of Engineering & Technology (UET), Lahore — 2019–2023.

PROFESSIONAL STRENGTHS

- **Client communication & scoping** — translating non-technical requirements into actionable Shopify scopes and delivery timelines.
- **Design collaboration** — working directly with designers in Figma to assess feasibility and ship pixel-perfect builds.
- **Mentorship & team support** — reviewing junior developers' code, handling escalations, and unblocking teammates.
- **Proactive ownership** — raising risks early, resolving blockers before they escalate, and keeping stakeholders updated.
